

Figure S1. Compounds identified from the Biolog screen that coincided with reduced attachment by $\Delta sagS::CTX-sagS$ relative to $\Delta sagS::CTX$ mutant strain. Graph show OD_{570nm}/OD_{600nm} values of CV bound by the $\Delta sagS::CTX-sagS$ strain normalized to values obtained from the $\Delta sagS::CTX$ mutant. Each compound was tested in biological duplicate with one well per assay. Error bars indicate standard deviation.
